The Claude LinkedIn Marketing Vault

10 Copy-Paste Claude Skills That Replace Your Marketing Team

What Claude Skills Are (And Why They Replace Your Marketing Stack)

Skill 1: LinkedIn Profile Optimizer

Skill 2: Viral Hook Writer

Skill 3: LinkedIn Post Generator

Skill 4: Visual Content Designer

Skill 5: DM Conversation Skill

Skill 6: Comment Strategy Writer

Skill 7: CTA & Handraiser Writer

Skill 8: Carousel Post Builder

Skill 9: Content Calendar Planner

Skill 10: LinkedIn Content Repurposer

The Automation Layer — When You Outgrow "Manual"

What Claude Skills Are (And Why They Replace Your Marketing Stack)

The End of Prompting

Most people use Claude like a search engine.

They type a long, rambling prompt. They hit enter. They hope for the best.

That is "Slot Machine Prompting." It isn't a strategy. It's a gamble.

If you have to write a 500-word prompt every time you want a post, you haven't automated anything.

You've just traded one manual task for another.

The era of "prompt engineering" is over. The era of "installing" has begun.

What is a Claude Skill?

A Skill is a pre-configured instruction file.

It is written in Markdown. It acts as a permanent brain transplant for your AI.

It tells Claude exactly who to be, what data to ignore, and what "High Quality" looks like for your specific brand.

You don't "chat" with a Skill. You delegate to it.

Once installed, the AI remembers your tone, your constraints, and your goals.

You paste it once. It runs forever.

The 30-Second Setup

These are designed for operators, not engineers.

The setup is three steps:

1/ Download the file from the Vault.

2/ Paste the text into a Claude Project or a Cowork folder.

3/ Give it a task.

There is no "fine-tuning" required. No Python scripts. No 90-minute tutorials.

You are 30 seconds away from a custom-built marketing department.

The Lead-Gen Ecosystem

These 10 Skills aren't a random collection of tools.

They are a sequenced lead-generation machine.

They follow the exact path a lead takes from "Stranger" to "Customer":

→ Profile Optimizer: Fixes your landing page.

→ Viral Hook Writer: Captures attention in the feed.

→ Content Generator: Builds authority daily.

→ DM Conversation Skill: Moves the conversation to the inbox.

→ Lead-Gen Handraiser: Triggers the "I want this" response.

This is a proven system for running LinkedIn lead generation.

You don't need a content team. You need a Skill Vault.

Stop guessing what works. Execute a proven framework.

Stop playing for likes. Start playing for ROI.

Skill 1: LinkedIn Profile Optimizer

Most LinkedIn users treat their profile like a digital resume.

This is a failure of strategy.

Your profile is not a CV. It is a landing page.

If your "About" section reads like a corporate obituary, you are leaking leads every time you post.

Traffic without conversion is just vanity.

This skill audits your current presence with the cold eye of a conversion copywriter.

It analyzes your headline, about section, experience, and featured media.

The Output

The skill runs a diagnostic scan across 5 core conversion categories.

It assigns a 1-10 score for each.

→ It generates 3 headline variants based on your unique ROI.

→ It rewrites your "About" section using the Hook/Credibility/Proof/CTA framework.

→ It applies a strict buzzword kill list.

The kill list removes 17 phrases that signal "average."

If your profile contains "results-driven," "passionate about," or "team player," the skill deletes them.

Serious operators let their proof do the talking.

Algorithm Insight

Your headline is the most heavily indexed field for LinkedIn search.

If you are not optimized for specific keywords, you do not exist in the search results.

Your Social Selling Index (SSI) score directly impacts your initial reach.

A high-conversion profile signals to the algorithm that you are a "Quality Creator."

Optimize the landing page before you buy the traffic.

Copy-paste this skill file into Claude:

> Loading Markdown code...
```

Skill 2: Viral Hook Writer

The "See More" button is the only metric that matters for the first 3 seconds.

90% of a post's performance is decided by the first line.

If the hook fails, the rest of your value is invisible.

Most people write hooks that are too soft, too long, or too "excited."

This skill eliminates the guesswork by using proven psychological triggers.

It ignores "creative writing" in favor of data-backed attention capture.

The Frameworks

The skill generates 10 hooks per topic using 4 specific frameworks:

→ Contrarian: Challenging a deeply held industry belief.

→ Specificity: Using exact numbers to build immediate authority.

→ Negative Bias: Highlighting the cost of inaction or a common mistake.

→ Story Opener: Dropping the reader into the middle of a high-stakes moment.

It avoids the "Amateur Trap."

No questions as openers. No "I'm excited to share." No fluff.

Algorithm Insight

The algorithm prioritizes "dwell time."

To get dwell time, you need the click.

Hooks under 200 characters perform significantly better on mobile devices.

Keep your opening sentences under 12 words.

This creates a high-velocity reading experience.

Short sentences reduce cognitive load.

When the brain finds reading easy, it keeps reading.

These frameworks are tested so you don't have to guess what works.

```

Skill 3: LinkedIn Post Generator

Consistency is the tax you pay for authority.

But most creators struggle because they try to be "inspired" every morning.

Operators don't rely on inspiration. We rely on systems.

This skill turns raw ideas into high-performance assets using the Epiphany Bridge structure.

It ensures every post follows a logical path from problem to profit.

The System

The skill uses 5 core frameworks to keep your feed from becoming repetitive:

→ The Story: A personal narrative that leads to a business lesson.

→ The Framework: A step-by-step breakdown of a complex process.

→ The Hot Take: A polarizing opinion that builds a "tribe."

→ The Case Study: Hard data and results from a specific project.

→ Behind-the-Scenes: Showing the "messy middle" of your operation.

The formatting is strictly optimized for mobile users.

No paragraph exceeds 2 lines.

There is a blank line after every single sentence.

The total length is capped at 250 words to maintain high completion rates.

Algorithm Insight

The LinkedIn algorithm is a walled garden.

It wants to keep users on the platform.

External links in the post body kill reach by approximately 60%.

The algorithm detects the link and de-prioritizes the post in the feed immediately.

Never put links in the body.

Deliver your value natively, then move the conversation to the comments or DMs.

> Loading Markdown code...
```

Skill 4: Visual Content Designer

LinkedIn is becoming a visual-first platform.

Text-only posts are fighting for space against high-contrast graphics.

Claude cannot "draw" a PNG, but it is a world-class front-end developer.

This skill uses Claude to write clean HTML and CSS code for social assets.

You simply run the skill, copy the code into a viewer, and take a screenshot.

It produces professional-grade graphics without a design degree.

The Output

You set your brand configuration once: colors, fonts, and logo.

The skill then generates consistent visual assets every time:

→ Quote Cards: Bold text on high-contrast backgrounds.

→ Stat Cards: Visualizing data points for immediate impact.

→ Infographic Outlines: Structured lists that look like premium design.

→ Social Graphics: Branded frames for your insights.

All outputs are sized at 1080x1350.

This 4:5 aspect ratio is the "Goldilocks" zone for LinkedIn.

It takes up the maximum vertical real estate on a mobile screen.

Algorithm Insight

Stopping the scroll is a physical act.

A bright, branded graphic acts as a pattern interrupt.

When the user stops to look at the image, the "dwell time" clock starts.

This tells the algorithm your content is engaging before they even read a word.

Stop fighting for attention with words alone.

Use the browser to build your brand.

Copy-paste this skill file into Claude:

> Loading Markdown code...
```

Skill 5: DM Conversation Skill

The feed is for attention. The DMs are for revenue.

Most people treat DMs like a spam folder.

They send "Found your profile interesting" and wonder why they get blocked.

This skill treats the DM as a high-stakes negotiation.

It is a research-first system that prioritizes relevance over volume.

The Sequence

The skill builds a 5-touch sequence spread over 21 days.

It uses three distinct tiers of personalization:

→ Tier 1: Named signal (a specific post or podcast they appeared on).

→ Tier 2: Company and Role (addressing specific industry pain points).

→ Tier 3: Volume Template (high-quality, low-friction outreach).

The golden rule of this skill: Never follow up with nothing new.

Every message must provide a fresh "gift" of value or a new insight.

Algorithm Insight

LinkedIn is aggressive about automation detection.

They don't detect the "tool" — they detect behavioral patterns.

Bot-like behavior includes sending 100 messages in 60 seconds or using identical templates.

Safety limits are mandatory: ~20/day for free accounts, ~150/day for Premium.

The skill randomizes the timing and tone to mimic human behavior.

Stay under the radar by acting like a person, not a script.

Consider using a LinkedIn automation tool to handle DM delivery at scale — one that sends lead magnets via DM to every commenter, with random human-speed delays.

Copy-paste this skill file into Claude:

> Loading Markdown code...
```

Skill 6: Comment Strategy Writer

The Friction

Most people treat comments like a secondary chore.

They post. They ghost. They wonder why their reach is flat.

The algorithm is a social feedback loop. If you don't feed it, it won't feed you.

The Mechanics

This skill solves the "blank page" problem of networking.

It executes a comment-first strategy.

You engage on target accounts for 14-21 days before you ever send a connection request.

This builds familiarity. It turns a cold lead into a warm handshake.

The skill categorizes your response based on a specific taxonomy:

→ Value-Add: Teaching something the original author missed.

→ Agreement + Extension: Agreeing, then adding a new layer.

→ Contrarian + Respectful: Disagreeing without being a jerk.

→ Question: Sparking a conversation.

→ Story: Humanizing the data.

The Routine

30 minutes. 10 thoughtful comments.

5 on target accounts. 5 on trending industry leaders.

"Great post!" is a death sentence.

LinkedIn deprioritizes generic phrases. They want depth.

Algorithm Insight

Comments carry 2x the weight of a "Like" in the current algorithm.

Engagement pods are dead.

LinkedIn detects reciprocal patterns with 97% accuracy.

If you use pods, you are flagging your account for suppression.

A LinkedIn automation tool can auto-reply to every commenter on your posts with rotating, personalized responses — so you never miss a lead.

```
> Loading Markdown code...
```

Skill 7: CTA & Handraiser Writer

The Earned Ask

You don't get the click because you asked.

You get the click because you earned it.

Most CTAs fail because they lack the "Value Exchange."

The Mechanics

This skill builds your CTA based on the "Earned Ask" principle.

It chooses the right weapon for the job:

→ Question: To drive comments and algorithmic reach.

→ Resource: To drive DM inquiries.

→ Action: To drive external traffic.

→ Handraiser: To force self-identification.

The Handraiser

The Handraiser is the ROI operator's favorite tool.

"Comment VAULT below" creates a list of warm leads.

They are literally raising their hand and saying "I want what you have."

One CTA per post. Never stack asks.

Stacking asks confuses the reader. A confused reader scrolls.

Algorithm Insight

LinkedIn's NLP filters are aggressive.

Phrases like "Like for Part 2" or "Tag a friend" are suppressed immediately.

Engagement bait is a race to the bottom.

A LinkedIn automation platform can capture every keyword comment, auto-DM the lead magnet, and log the lead — turning a 4-hour manual process into zero work.

Copy-paste this skill file into Claude:

```
> Loading Markdown code...
```

Skill 8: Carousel Post Builder

The Friction

Text is fine. Visuals are better.

But designing carousels is a time sink that most operators can't afford.

This skill is built from mapping the structure of high-performing PDF decks.

The Mechanics

This skill generates the slide-by-slide copy and the structural logic.

It even provides the HTML/CSS for each slide if you want to automate the export.

It follows a proven psychological path:

→ Cover: A hook that stops the scroll.

→ Content (6-8 slides): One idea per slide. No clutter.

→ CTA: The final push.

The Technicals

Use 1080x1350 (4:5) dimensions.

Upload as a PDF. Keep it under 10MB.

Algorithm Insight

Carousels get 24% more engagement than text posts.

That is nearly 4x the impact for the same amount of thinking.

Dwell time is the primary signal for the LinkedIn algorithm.

Swiping through slides sends a massive "Quality" signal to the feed.

The Result

You stop being a writer and start being a media house.

Serious operators use carousels to dominate the "Above the Fold" real estate.

It makes your profile look like an authority, not a hobbyist.

Copy-paste this skill file into Claude:

```
> Loading Markdown code...
```

Skill 9: Content Calendar Planner

The Friction

"What do I post today?" is the question that kills consistency.

Random acts of content produce random results.

You need a system, not a mood.

The Mechanics

This skill builds a 4-week calendar based on 3-5 content pillars.

Every pillar must pass four tests:

→ Do you have genuine expertise?

→ Does your audience actually care?

→ Is it sustainable for 6+ months?

→ Does it connect to what you sell?

The skill outputs real dates, pillar assignments, and hook previews.

The Ratio

The strict ROI-focused ratio:

→ 70% Core Expertise: Teaching your craft.

→ 20% Adjacent: Topics your audience also follows.

→ 10% Personal: Building the "Know, Like, Trust" factor.

The 80/20 rule applies: 80% value, 20% conversion.

Algorithm Insight

2-5 posts per week is the sweet spot.

Tuesday, Wednesday, and Thursday are the high-traffic days.

Aim for 8-10am in your audience's primary timezone.

Use a content calendar tool to schedule and auto-publish — your posts go live, and lead capture starts automatically.

Copy-paste this skill file into Claude:

```
> Loading Markdown code...
```

Skill 10: LinkedIn Content Repurposer

The Friction

You think everyone saw your post from three weeks ago.

They didn't.

95% of your audience missed it.

The Mechanics

Serious operators say one thing in 100 different ways.

This skill takes a single high-performing post and maps it into derivatives.

It turns one LinkedIn post into:

→ A Twitter/X thread.

→ An email newsletter snippet.

→ A carousel outline.

→ A short-form video script.

→ A series of quote cards.

The Strategy

Don't post them all at once.

Stagger the distribution over 2-4 weeks.

This ensures you are hitting different segments of your audience at different times.

Algorithm Insight

LinkedIn does not penalize repurposed content.

The "Duplicate Content" myth is for SEO, not social feeds.

Always rewrite the hook when you repost.

The hook is 90% of the battle; if the first line fails, the rest is invisible.

The Result

You stop the content treadmill.

You work once and distribute forever.

Efficiency is the only way to scale without burning out.

Copy-paste this skill file into Claude:

```
> Loading Markdown code...
```

The Automation Layer — When You Outgrow "Manual"

The Reality

You now have 10 Skills.

You can run this entire system manually inside Claude.

You can copy. You can paste. You can manage your DMs.

But manual work has a ceiling.

The Breaking Point

When a post goes viral, manual work breaks.

200 commenters asking for a PDF. 100 DMs piling up.

Leads fall through the cracks. ROI vanishes in the administrative noise.

This is where automation enters the stack.

The Machine

The right LinkedIn automation platform handles the heavy lifting:

→ Comment Scanning: It watches your posts 24/7.

→ Auto-DM Delivery: It sends the lead magnet instantly.

→ Lead Capture: It logs every interaction in a dashboard.

→ Outbound Campaigns: It handles multi-step DM follow-ups.

→ Content Calendar: It publishes your posts on schedule.

The Math

A manual lead magnet post takes 4+ hours of management.

Automation reduces that to zero.

You focus on the strategy. The machine handles the fulfillment.

The Safety

Most automation is dangerous. The right tool is built for longevity.

Look for platforms that use human-mimicking behavior with random 20-35 second delays.

The automation should not act like a bot. It should act like a high-speed assistant.

The Next Step

You have the skills. Now you need the speed.

Stop playing Engineer. Start playing for ROI.

LinkedIn Post (VAULT Keyword)

Promotional Posts (3 Variations)
