The SEO/LLM Skills Pack for Claude

10 Copy-Paste Skills to Dominate Google AND AI Search

10 Copy-Paste Skills to Dominate Google AND AI Search

Part 1: What Are Claude Skills?

Part 2: The 10 Skills

Part 3: Advanced — Chaining Skills Together

Quick Reference

SEO is no longer one game. It is two.

You have to rank on Google. And you have to show up when someone asks ChatGPT, Perplexity, or Claude a question about your industry.

Most SEO professionals use AI like a chatbot. They type a question. They get a mediocre answer. They copy-paste it into a doc.

That is not automation. That is manual labor with extra steps.

This guide gives you something different.

10 modular Claude Skills you can install in under 5 minutes. Each one automates a specific SEO workflow. You run them with one command. No prompt engineering required.

Part 1: What Are Claude Skills?

The Skill vs. The Prompt

A prompt is a one-time request. You type it. You get a response. Next time, you type it again.

A Skill is a permanent set of instructions that lives inside your Claude workspace. It tells Claude exactly what role to play, what constraints to follow, and what format to output.

Think of it this way:

- A prompt is shouting instructions at a new hire every morning.
- A Skill is giving them a job description on Day 1. They know what to do from that point on.

Why Opus 4.6 Changes Everything

Claude Opus 4.6 has the reasoning depth to hold complex multi-step workflows in memory. Previous models would forget your instructions halfway through. Opus 4.6 does not.

This means you can give it a 500-line Skill definition and it will follow every rule, every constraint, every output format. Consistently. Every time.

How to Install These Skills

Method 1: Claude Projects (Web/Desktop)

1. Open Claude at claude.ai
2. Create a new Project (e.g., "SEO Skills Pack")
3. Click "Add to Project Knowledge"
4. Copy-paste each Skill below into a separate file
5. Name each file (e.g., `seo-site-auditor.md`)
6. Done. Type "Run SEO Site Auditor" to execute.

Method 2: Claude Code (CLI)

1. Create a folder: `~/.claude/skills/seo-skills/`
2. Save each Skill as a `SKILL.md` file in its own subfolder
3. Claude Code auto-discovers the skills
4. Run with `/seo-site-auditor` or just describe the task

That is it. No coding. No APIs. No setup headaches.

Part 2: The 10 Skills

Skill 1: SEO Site Auditor

What it does: Runs a comprehensive SEO audit on any page or site. Covers technical issues, on-page factors, Core Web Vitals signals, mobile optimization, and crawlability. Outputs a prioritized action plan.

When to use it: Client onboarding. Monthly check-ins. Diagnosing traffic drops.

How to run it: Paste the HTML source, URL content, or a Screaming Frog export. Type "Run SEO Site Auditor."

Example output: A table showing a missing canonical tag (Critical), images without alt text (Warning), and a recommendation to add FAQ schema (Optimization).

Skill 2: AEO Content Optimizer

What it does: Restructures existing content to rank in AI-generated answers. Optimizes for ChatGPT, Perplexity, Claude, and Google AI Overviews simultaneously.

When to use it: Updating blog posts that have traffic but no featured snippets. Preparing content for the age of zero-click search.

How to run it: Paste your existing content plus the target query. Type "Run AEO Content Optimizer."

Example output: A "Before" paragraph that buries the answer in line 8. An "After" version that leads with a direct 50-word answer, followed by structured supporting data.

Skill 3: Schema Markup Generator

What it does: Generates valid JSON-LD structured data for any page type. Supports Article, Product, FAQ, LocalBusiness, HowTo, Organization, and nested schemas.

When to use it: Adding rich results eligibility to any page. New content launches. Schema audits.

How to run it: Paste the page content or describe the page. Type "Run Schema Markup Generator."

Example output: A complete script block with nested Article + FAQPage + BreadcrumbList schema for a blog post with an FAQ section.

Skill 4: E-E-A-T Content Scorer

What it does: Scores any page against Google's Experience, Expertise, Authoritativeness, and Trustworthiness quality guidelines. Acts as a ruthless pre-publish quality gate.

When to use it: Final editorial review. Content audits. Identifying why a page is not ranking.

How to run it: Paste the page content. Type "Run E-E-A-T Content Scorer."

Example output: Score 6/10. Fail on Experience (no case study data). Fix: Add a personal result from a real client project in Section 2. Verdict: REVISE.

Skill 5: Keyword Intent Classifier

What it does: Takes a raw keyword list and classifies each by search intent, buyer journey stage, and AI answer risk. Flags keywords where LLMs will answer without a click.

When to use it: Keyword research. Content calendar planning. Identifying zero-click threats.

How to run it: Paste a keyword list (one per line). Type "Run Keyword Intent Classifier."

Example output: A classified table showing "best SEO tools 2026" as High Priority (Commercial, Low AI Risk) and "what is SEO" as Authority-Only (Informational, High AI Risk).

Skill 6: Competitor Gap Finder

What it does: Compares your content against a competitor's to find semantic gaps, missing entities, and uncovered sub-topics.

When to use it: When a competitor outranks you. Content refresh planning. Building content clusters.

How to run it: Paste both your content and the competitor's content. Type "Run Competitor Gap Finder."

Example output: "Competitor covers schema validation tools in a dedicated section (450 words). Your guide does not mention this at all. Impact: HIGH."

Skill 7: GBP Post Generator

What it does: Creates optimized Google Business Profile posts for local SEO. Generates 3 variations (Event, Offer, Update) with geo-modifiers and CTAs.

When to use it: Weekly local SEO maintenance. Client GBP management. Local content calendars.

How to run it: Provide the business name, location, and service/topic. Type "Run GBP Post Generator."

Example output: Three ready-to-post GBP updates for a dental clinic in Chicago.

Skill 8: Internal Linking Strategist

What it does: Analyzes your site structure (page titles, topics, URLs) and maps out a semantic internal linking strategy using the Hub and Spoke model.

When to use it: Site architecture planning. Content cluster optimization. Fixing orphan pages.

How to run it: Paste a list of your page titles, URLs, and target keywords. Type "Run Internal Linking Strategist."

Example output: A cluster map showing "SEO Guide" as the pillar with 8 spoke articles, 3 orphan pages identified, and specific anchor text for each recommended link.

Skill 9: SEO Content Brief Writer

What it does: Generates a comprehensive content brief that is ready to hand to a writer. Covers SEO requirements, user intent, structure, and competitor benchmarks.

When to use it: Before writing any new content. Delegating to writers. Ensuring consistency across content teams.

How to run it: Provide the target keyword and audience. Type "Run SEO Content Brief Writer."

Example output: A complete brief for "Best CRM for Small Business" including H2 structure, 8 PAA questions, word count target of 2,800 words, and specific AEO formatting notes.

Skill 10: AI Search Visibility Checker

What it does: Evaluates how well your content is positioned to appear in AI-generated answers. Produces a Machine Readability Score and specific recommendations.

When to use it: Auditing high-value pages. Checking if content is AEO-ready. Pre-publish validation.

How to run it: Paste your content and the target query. Type "Run AI Search Visibility Checker."

Example output: Score 5/10. The answer to the main query is buried in paragraph 4. Rewrite the opening to lead with a direct 50-word answer. Convert the comparison section from prose to a table.

Part 3: Advanced — Chaining Skills Together

The real power is not in running one skill at a time. It is in chaining them.

The "New Client Onboarding" Chain

When you land a new SEO client, run this sequence:

1. **SEO Site Auditor** — Get the full picture of technical issues
2. **AI Search Visibility Checker** — See where they stand in AI search
3. **Competitor Gap Finder** — Compare against their top competitor
4. **Keyword Intent Classifier** — Prioritize which keywords to attack first
5. **SEO Content Brief Writer** — Generate briefs for the first 5 pieces of content

Total time: 30 minutes.

What this used to take: 2-3 days.

The "Content Refresh" Chain

When updating an existing blog post:

1. **E-E-A-T Content Scorer** — Identify weaknesses
2. **AEO Content Optimizer** — Restructure for AI visibility
3. **Schema Markup Generator** — Add or fix structured data
4. **AI Search Visibility Checker** — Verify the improvements

The "Weekly Local SEO" Chain

For local business clients:

1. **GBP Post Generator** — Create the weekly post
2. **Internal Linking Strategist** — Check if the GBP landing page is well-linked
3. **Schema Markup Generator** — Ensure LocalBusiness schema is current

Building Your Own Skills

These 10 skills are your starting point. Once you see the pattern, you can build your own.

The formula is simple:

1. **Role** — Tell Claude exactly who it is (not "SEO expert" but "Senior Technical SEO with 15 years in enterprise SaaS")
2. **Constraints** — Define what it CANNOT do (no fluff, no invented data, specific output formats)
3. **Output Format** — Tables, code blocks, numbered lists. Never "write me a paragraph."
4. **Quality Gate** — Build in a self-check (scoring, validation, priority ranking)

The more specific your constraints, the better the output.

Quick Reference

Skill	Command	Best For
SEO Site Auditor	Run SEO Site Auditor	Technical audits, client onboarding
AEO Content Optimizer	Run AEO Content Optimizer	Featured snippets, AI citations
Schema Markup Generator	Run Schema Markup Generator	Rich results, structured data
E-E-A-T Content Scorer	Run E-E-A-T Scorer	Pre-publish quality gate
Keyword Intent Classifier	Run Keyword Intent Classifier	Keyword research, content planning
Competitor Gap Finder	Run Competitor Gap Finder	Outranking competitors
GBP Post Generator	Run GBP Post Generator	Local SEO maintenance
Internal Linking Strategist	Run Internal Linking Strategist	Site architecture, topical authority
SEO Content Brief Writer	Run Content Brief Writer	Delegating to writers
AI Search Visibility Checker	Run AI Visibility Checker	AEO readiness audits
