
The Windows Claude Cowork Playbook

20 Copy-Paste Workflows to Turn Your PC into an Autonomous Agent.

📑 Table of Contents

1. **Introduction:** The "God Mode" Update for Windows
2. **Part 1:** Unlocking Cowork on PC (The Setup)
   - 1.1 Installation & The "Tasks" Switch
   - 1.2 The "Memory" System: Configuring CLAUDE.md
   - 1.3 The "Nervous System": MCP Connectors
3. **Part 2:** The Revenue Engine (Sales & Marketing) - Workflows 1 to 6
4. **Part 3:** The Efficiency Machine (Product & Ops) - Workflows 7 to 12
5. **Part 4:** The Executive Analyst (Strategy & Research) - Workflows 13 to 20
6. **Conclusion:** The New Baseline

Introduction: The "God Mode" Update for Windows

For the past year, the AI revolution has felt somewhat uneven. While web-based chatbots have democratized access to intelligence, the true power users — the ones building autonomous loops and agentic workflows — have largely been confined to MacOS or complex developer environments.

That changes today.

Claude Cowork has officially landed on Windows with full feature parity.

This is not a cosmetic update. This is a fundamental shift in how you interact with your computer. Until now, using AI meant copying text from a document, pasting it into a browser, waiting for a response, and pasting it back. It was manual labor with a spellchecker.

With the Windows release, Claude Cowork gains **Direct File Access.** It can read your folders. It can edit your code. It can parse your messy downloads directory. It connects to the "nervous system" of your PC.

> You are no longer "chatting" with a bot. You are assigning tasks to a knowledge worker that lives inside your hard drive.

This Playbook is your instruction manual. We have stripped away the theory. Below, you will find the technical setup guide to unlock these features in under 5 minutes, followed by **20 concrete, copy-paste workflows** derived from the most successful beta testers in Sales, Marketing, Operations, and Strategy.

Stop chatting. Start delegating.

Part 1: Unlocking Cowork on PC (The Setup)

Most users will download the app and treat it like a web wrapper. They will miss 90% of the value. To turn Claude into a true "Coworker," you need to configure the environment to allow it to **think, act, and remember.**

1.1 Installation & The "Tasks" Switch

The Windows release runs inside the standard Claude Desktop app, but the "Cowork" features (often labeled as "Tasks" in the UI) must be actively used to trigger the agentic behaviors.

The 3-Minute Setup

Download: Go to the official Anthropic site and download the latest Claude Desktop for Windows.

The Toggle: Launch the app. Look for the mode selector. You will see "Chat" (standard) and "Cowork" (or "Tasks"). Select **Cowork.**

The Permission Handshake: The first time you ask Cowork to "Look at the files in this folder," Windows will prompt you for permission.

> **Crucial Step:** Do not just grant access to a single file. Create a dedicated workspace folder (e.g., `C:\Users\Name\Cowork_Projects`) and grant access to that **entire directory.** This allows Claude to create new files (outputs) without asking for permission every time.

1.2 The "Memory" System: Configuring CLAUDE.md

This is the **secret weapon** of power users.

On the web, every time you start a new chat, Claude forgets who you are. You have to remind it: "I am a marketer, use this tone..."

On Windows, Cowork uses a file called `CLAUDE.md` to store persistent instructions. This works on two levels:

Level A: Global Instructions (The "User Profile")

This file lives in your home configuration folder. Claude reads it at the start of every session.

How to set it up (PowerShell):

```
> Loading JavaScript code...
```

Example CLAUDE.md:

```
> Loading JavaScript code...
```

Level B: Project Instructions (The "Context")

You can also drop a `CLAUDE.md` file into **specific project folders.** When Cowork opens that folder, it adopts that specific persona.

Example: Inside your `\Sales_Reports` folder, the CLAUDE.md might say: *"You are a strict financial auditor. Flag any deal missing a 'Close Date.'"*

Example: Inside your `\Blog_Drafts` folder, it might say: *"You are a creative writer. Use the 'StoryBrand' framework."*

This allows you to switch context simply by changing folders, just like a human employee switching departments.

1.3 The "Nervous System": MCP Connectors

Windows Cowork supports the **Model Context Protocol (MCP).** This connects Claude to external tools like Google Drive, Slack, and GitHub.

In the Settings menu under **Developer / Tools,** you can point Claude to MCP servers.

Why this matters: Without MCP, Claude can only see files on your drive. With MCP, Claude can see your company's data in the cloud.

> **Parity Note:** The Windows implementation uses the exact same JSON configuration files as the Mac version, meaning any plugins developed for Mac will work natively on your PC.

Part 2: The Revenue Engine (Sales & Marketing)

Revenue teams are drowning in "admin work" — data entry, list building, and content formatting. Cowork excels here because it can process structured data (CSVs) and unstructured data (PDFs/Websites) simultaneously.

Workflow 1: The LinkedIn Miner

The Problem: You have a customer who loves you. You want to ask them for introductions, but you don't know who they know. Manually clicking through their LinkedIn connections takes hours.

The Fix: Use Cowork to ingest their network and surface the gold.

Folder Setup: Drop your "Ideal Customer Profile" (ICP) document and the customer's exported LinkedIn connection list (PDF or CSV) into a folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 2: Pipeline Hygiene & Recovery

The Problem: Your CRM (Salesforce/HubSpot) is a mess. Deals are missing next steps, dates are expired, and you don't know what to prioritize.

The Fix: Cowork acts as a relentless Sales Ops manager.

Folder Setup: Export your "Open Deals" view as a CSV. Save it to the folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 3: The "Sales Call" Digestion System

The Problem: You have 5 hours of Zoom calls. You need to update the CRM, but re-listening is impossible.

The Fix: Bulk processing of transcripts.

Folder Setup: Download your call transcripts (VTT, TXT, or DOCX) from Zoom/Teams. Drop them all into one folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 4: The 30-Day Content Calendar

The Problem: You wrote a great whitepaper or blog post. Now you need to promote it for a month, but staring at a blank calendar is paralyzing.

The Fix: Turn one asset into a library.

Folder Setup: Upload your source file (PDF/Doc) and your "Brand Voice Guidelines."

The Prompt:

```
> Loading JavaScript code...
```

Workflow 5: The "Ad Spend" Analyst

The Problem: You have data in Facebook Ads, data in Google Ads, and data in GA4. You are manually pasting them into Excel to figure out what's working.

The Fix: Cowork joins the datasets for you.

Folder Setup: Export CSVs from your ad platforms and analytics. Ensure they have a common column (like UTM Campaign Name).

The Prompt:

```
> Loading JavaScript code...
```

Workflow 6: The "Repurposing Engine"

The Problem: You have a library of old webinars and podcasts gathering dust.

The Fix: Transform audio/video transcripts into written assets.

Folder Setup: A folder containing transcripts of your CEO's past talks.

The Prompt:

```
> Loading JavaScript code...
```

Part 3: The Efficiency Machine (Product & Ops)

This section focuses on the messy reality of internal operations — SOPs, receipts, tickets, and specs. This is where the **"Local File Access"** of the Windows app shines.

Workflow 7: The Feedback Cluster

The Problem: Your product team has 500 rows of customer feedback in a CSV. It's too much to read, so they ignore it.

The Fix: Semantic clustering.

Folder Setup: Export feedback from Intercom/Jira to CSV.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 8: The PRD Drafter

The Problem: You have an idea, some whiteboard photos, and a few Slack messages. You need a formal Product Requirements Document (PRD).

The Fix: Cowork synthesizes scattered inputs.

Folder Setup: Drop your rough notes, competitor screenshots, and chat logs into a folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 9: The "Receipt Cruncher"

The Problem: It is end-of-month. You have a folder of 50 random screenshots of receipts. You hate Excel.

The Fix: Cowork uses OCR (Vision) to read the images and structure the data.

Folder Setup: A folder full of images/PDFs of receipts.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 10: The SOP Generator

The Problem: You explained a process to your team in Slack, but nobody documented it. Now they are asking you again.

The Fix: Turn chat logs into a Playbook.

Folder Setup: Copy/paste the Slack conversation or rough notes into a text file.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 11: The Project Planner

The Problem: You have a backlog of tasks but no timeline.

The Fix: Automated dependency mapping.

Folder Setup: A document listing your backlog items.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 12: The Competitive Analysis Pack

The Problem: You need to know what your competitors are doing, but visiting 10 websites and reading their docs is tedious.

The Fix: Agentic Research.

Folder Setup: Create a text file with a list of competitor URLs.

The Prompt:

```
> Loading JavaScript code...
```

Part 4: The Executive Analyst (Strategy & Research)

This section is for the "Chief of Staff" persona. It moves beyond execution into **synthesis and decision support.**

Workflow 13: The "Board Whisperer"

The Problem: Board meeting is next week. You have reports from Sales, Marketing, and Product, but no narrative.

The Fix: Automated synthesis.

Folder Setup: Drop the Q3 reports (PDFs/Excel) from all departments into one folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 14: The Market Landscape Scan

The Problem: You are entering a new vertical. You need to sound like an expert in 24 hours.

The Fix: Deep-dive synthesis.

Folder Setup: Download 5-10 industry whitepapers or trend reports into a folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 15: The "Literature Review"

The Problem: You have 20 academic papers or technical PDFs. You need to know the consensus without reading 500 pages.

The Fix: Cross-document analysis.

Folder Setup: A folder of PDFs.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 16: The "Skill-ized" Workflow

The Problem: You run the same research task every Friday. Writing the prompt every time is annoying.

The Fix: Creating a reusable "Skill."

The Setup: This is a meta-workflow. You ask Claude to write a script for future Claude.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 17: The Contract Reviewer

The Problem: You have 5 vendor contracts to sign. You aren't a lawyer, but you need to check for red flags.

The Fix: Risk analysis.

Folder Setup: Drop the unsigned contracts into a folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 18: The "Chief of Staff" (Run My Day)

The Problem: Your calendar is full, your to-do list is endless, and you are overwhelmed.

The Fix: Ruthless prioritization.

Folder Setup: Export your calendar (ICS or text list) and your task list into a folder.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 19: The Technical Explainer

The Problem: You are a non-technical PM. Engineers send you a GitHub repo and say "The docs are in the Readme." You don't understand it.

The Fix: Translation.

Folder Setup: Download the README.md and any architecture diagrams from the repo.

The Prompt:

```
> Loading JavaScript code...
```

Workflow 20: The Creator Operating System

The Problem: You run a podcast/newsletter. You have audio files, sponsor reads, and show notes scattered everywhere.

The Fix: The "Mini-Business" Manager.

Folder Setup: A folder for your specific Episode (e.g., `\Ep_102`). Drop the audio file and sponsor info there.

The Prompt:

```
> Loading JavaScript code...
```

Conclusion: The New Baseline

The release of Cowork on Windows is not just a software update. It is the removal of the final barrier between "AI as a novelty" and "AI as a utility."

By following the setup in Part 1 and executing the workflows in Parts 2-4, you are effectively hiring a team of **20 specialists** who work for free, never sleep, and live inside your PC.

> **Your Next Step:** Don't try to implement all 20 at once. Pick one workflow that represents your biggest weekly pain point (e.g., The Receipt Cruncher or The LinkedIn Miner). Create the folder. Drop the files. Paste the prompt.

Welcome to the future of work.

The Windows Cowork Playbook — a LeadPanther framework for agentic AI operations on PC.
