The C-Suite Squad Playbook

10 Production-Grade Claude Cowork Agents That Run Your Business Like a Leadership Team

Part 1: Why Generic AI Prompts Fail

Most people use Claude like a slot machine.

You type a prompt.

You pull the lever.

You hope for brilliant strategy.

You get a textbook summary instead.

Here is the dirty secret about AI prompting.

Telling an LLM to "act as an expert" is lazy.

0

It does not work.

When you type "Act as a CEO."

The AI does not give you a genius.

It averages every executive on the internet.

It blends a Fortune 500 veteran with a college intern.

You get the mean.

You get average.

Serious operators do not play for average.

We play for ROI.

We want specialized advisors.

We want highly-opinionated frameworks.

To get consultant-level output.

You must constrain the model.

You have to force it to niche down.

I spent the last month testing persona configurations across Claude at *LaunchpadFast*.

I broke the safety filters.

I audited the outputs.

I found the exact structure that kills generic advice.

It is a 5-Element Framework.

1. Role + Seniority
You do not say "marketer."

You say "CMO with 15 years scaling B2B SaaS."
Seniority dictates decision-making.

2. Industry Context
A CFO in crypto thinks differently than a CFO in manufacturing.
You must define the sandbox.
You must give the AI boundaries.

3. Methodologies
Give the AI a brain.
Force it to use specific mental models.
First Principles.
Unit Economics.
Theory of Constraints.

4. Constraints
Real executives work with limits.
Time.
Money.
Headcount.
Without constraints.
The AI hallucinates success.

5. Output Format
Never ask for "thoughts."
Ask for a 2-page executive brief.
Demand structured data.

Basic prompt packs are garbage.

They are shallow one-liners.

This playbook is different.

Every agent inside is a full system prompt.

They have specific decision-making frameworks.

They have strict boundaries.

They audit.

They diagnose.

They execute.

I labored over these so you do not have to.

Stop accepting AI hallucinations.

Start demanding recursive accuracy.

Part 2: How to Use This Playbook

This is not a reading assignment.

This is a deployment manual.

You do not read these prompts.

You copy-paste them into Claude.

You turn your empty chat window into a leadership team.

Here is the exact workflow.

Step 1: Copy the Prompt
Grab the entire text block for the agent you need.
Paste it into a new Claude chat.
Or save it as a Claude Project custom instruction.

Step 2: Inject Your Context
Look for the brackets.
Replace the [BUSINESS CONTEXT] placeholders with your actual data.
Feed it your revenue numbers.
Paste your messy customer notes.
Give it your actual constraints.

Step 3: Delegate the Task
Do not ask it to chat.
Give it a job description.
Use one of the example queries provided for each agent.
Then walk away while it works.

When to Use Which Agent
Do not guess.
Deploy the right specialist for the right bottleneck.

→ AI CEO: You need strategic alignment and resource allocation.
→ AI CMO: You need a content engine and funnel optimization.
→ AI CFO: You need cash flow models and margin analysis.
→ AI COO: You need to map workflows and kill bottlenecks.
→ AI CRO: You need to fix your demo-to-close rate.

You do not need to hire a $200k executive.

You just need to know how to delegate to Claude.

Before You Continue: Why We Verify Subscribers

Quick note.

We have had multiple instances of bots scraping this content and people republishing it without authorization.

This guide took 40+ hours to build. It is free. But it is not public domain.

To keep the full playbook available for real humans (and out of the hands of content thieves), we require a valid email address to unlock the remaining sections.

It takes 3 seconds. No spam. No upsells. Just proof you are a real person.

Enter your email below to unlock the full guide.
