Why I canceled Clay (The $0 Playbook)

28,937 high-intent leads without burning domains or ads.

Team,

Everyone says you need a massive "Cold Email Infrastructure" to scale B2B in 2026.

They are wrong.

While your competitors are burning domains, paying for expensive data enrichment, and fighting spam filters on Instantly, my clients are generating thousands of qualified leads for free.

The result:

- **28,937** Inbound Leads.
- **$72k** in new ARR from a single asset.
- **$0** CAC (No Clay, No Instantly, No Ads).

I just documented the entire framework into a new playbook called **"The 28k Protocol."**

It breaks down how we stopped doing "outbound" and started engineering "assets" that attract high-intent buyers automatically.

The "Execution Gap"

The PDF gives you the *map*. But this engine is hard to build alone.

Research shows it takes ~20 hours of frustration to reach competency in this specific AI stack. Most people quit at Hour 5 because of formatting errors and API issues.

I want to compress that timeline to 4 hours.

On **Thursday, Jan 23rd**, I am hosting a **Live Build Session**.

We aren't just "learning." We are building.
You bring the offer. I bring the code, the prompts, and the automation.
You leave with a deployed asset.

The Catch

This is high-level execution. I only want builders who actually have a valid offer to sell.

So, I built an **AI Admissions Officer** to grade your offer in real-time.

1. Click the link below.
2. Tell the AI about your business.
3. It will grade your "Authority Score."

If you score above **85**, the system will unlock a seat for you.

Test your offer clarity here:
👉 ***Apply for The Protocol (AI Grader)***

Let's build.

-John
